# Millionth metre of Inpipe liner laid

*Technicians Jörgen Thunelöv, Magnus Eriksson, Patrik Forsman and Janne Kihl at NCC have something special to look forward to, as they were the ones who laid the millionth metre of Inpipe liner this summer.*

*“This is a milestone in Inpipe’s history”, says Inpipe’s marketing manager Roland Lindberg. Now the technicians are going to get their reward.*

“

For us, this is a symbol of Inpipe’s great development and capacity, and we want to make the millionth metre something special for the guys who laid it. We have been clear that it should be the technicians themselves that benefit from this, not their bosses”, comments Roland Lindberg.

The millionth metre ended up in the Gåshaga area on Lidingö in Stockholm, where a main sewer with several pumping stations was being renovated.

“There were problems with leaks of bad-smelling hydrogen sulphide, root intrusion and fat deposits inside the pipe”, explains Joakim Lindholm, production manager at NCC Construction.

**This team of technicians at Inpipe contractor NCC laid the millionth metre of Inpipe liner.**

One of the six stretches of pipe was restored using an 81.5 metre-long 450-millimetre Inpipe liner.

“The installation went extremely well”, says Joakim Lindholm. “The guys knew that the millionth metre was coming up, so they were really keen to open each box and see if there was anything special inside. But nothing was discovered.”

However, at Inpipe’s factory, we were keeping an eye on things and

of the two NCC teams who worked on the Gåshaga pipe, one of them did draw the winning lot. Roland Lindberg now looks forward to breaking the news to the lads.

“They are going to get a prize, but it will be a surprise”, he says, concluding: “Now we intend to work hard to reach our next million as quickly as possible!”

**The Inpipe liner is a pliable, glass fibre reinforced liner for renovation and rehabilitation of applications which call for a very high level of durability and strength. Inpipe is committed to be a total system supplier incl. delivery of liners, equipment, knowledge and training in order to ensure a long-term solution. Inpipe. Well-known technology. Ingenious minds.**
